In this library, the expected highest peaks are those representing His in the final amino acid position (X₂-His-Pro-Gln-Phe-Ala-Ala-Ala-thread (<u>SEQ ID NO:1</u>)). The endcapping species should make less difference (Devlin et al., *Science* 1990, 249, 404-406; Lam et al., *Nature* 1991, 354, 82-82; Schmidt et al., *J. Mol. Biol.* 1996, 255, 753-766). Both of these expected results are seen. Profiles for group fitness at a given position may be obtained by cyclic averaging over appropriate shorter cycle times that correspond to a given cylinder.
